

# ChronoChain - Blockchain Proof of Uptime

*designed by kycaine*

**ChronoChain** is an innovative blockchain platform designed to reward nodes based on continuous **uptime and active participation**. Unlike traditional blockchains that reward miners or validators immediately, ChronoChain implements a Proof of Uptime mechanism, where nodes accumulate rewards over time. By **sending periodic heartbeat signals to the network**, nodes prove their sustained activity, ensuring a highly reliable and resilient network. Transactions are recorded every 10 minutes, and all transaction fees, together with periodic bonus tokens, are collected into a centralized reward pool (re-pool) to be distributed fairly among eligible nodes.

**The tokenomics of ChronoChain are carefully structured to maintain long-term sustainability and fairness.** The genesis block releases a fixed supply of 1,000,000 tokens, while bonus tokens of 1,000 are introduced every 100 days and gradually decay by 5% every 300 days. Only nodes that maintain a minimum of 100 locked tokens and run continuously for at least 30 days are eligible to claim rewards. This dual layer reward system combining **Elder Rewards** for the longest-running nodes and **Party Rewards** for all valid nodes encourages network stability, long-term participation, and equitable distribution of incentives across the entire ecosystem.

---

## Key Features

1. Supports transfers of unlimited amounts using **bigint** type data.
2. Blockchain records transactions every **10 minutes** (new block).
3. Transaction fee is **0.05%** of the transaction amount.

---

## Blockchain Structure

1. New transactions are stored in the **tx-pool / transaction pool** (similar to Bitcoin's mempool).
2. All transaction fees are accumulated in the **re-pool / reward pool**.
3. Every **5 minutes**, nodes broadcast a **heartbeat-chain** signal to the blockchain as proof of their active status.
4. The **genesis block** releases **1,000,000 tokens**.
5. Every **100 days**, a **bonus token** of **1,000 tokens** is created and added to the re-pool / reward pool.
6. Every **300 days**, the bonus token amount decreases by **5%**.
7. No additional tokens are created beyond the **genesis release** and **bonus tokens**.

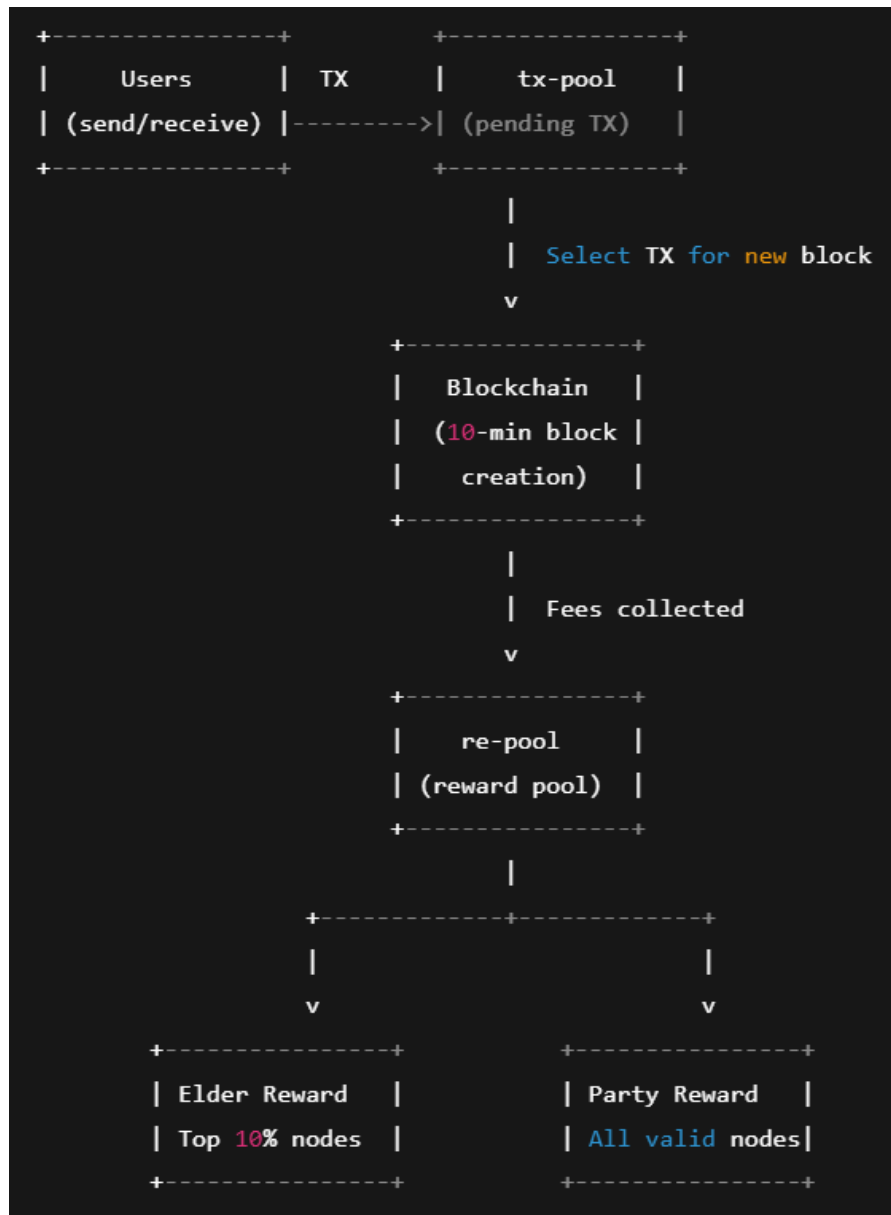

---

## Reward Distribution

1. Nodes **do not receive immediate rewards** when creating a block.
2. After **30 days**, the re-pool rewards are fully distributed among all eligible nodes according to the following rules:
  - **Elder Reward:** 10% of the total reward is allocated to the **top 10% longest-running nodes**.
  - **Party Reward:** 90% of the total reward is allocated to **all valid active nodes\***.

Nodes eligible for the Elder Reward also receive a share of the Party Reward.

*\*Only nodes that have been running continuously for **30 days** and maintain a **minimum of 100 locked tokens** during operation are considered valid for reward distribution.*
